Website: chemicalinjury.net

Dear Prospective Patients,

With the development of the neural protocol (with doses based upon individual test results and patient response) patient progress has been much more rapid and I can take new patients more frequently than was ever possible.

If you are interested in becoming a patient, please call my office at 301-241-4346. You will be sent a questionnaire that will need to be faxed or mailed back to the office.

I read all questionnaires and once the questionnaire is reviewed you will be contacted by my staff. The usual turnaround time is 1 week or less.

If accepted as a patient, you will be required to take the SpectraCell Micronutrient Test. The kit is mailed to your house and you will need to take it to a hospital lab or a doctor to perform the blood draw. Other additional testing may be required.

Once all the kits have been sent to their respective labs for testing, you can call to schedule your first appointment. Approximately 4 weeks is allowed for the labs to complete their testing.

This website is designed to be a resource for all who suffer from chemical and environmental injury. I want to provide everyone as much information as possible so that they can achieve significant health improvements even if they are not able to see me as a patient.

Sincerely,

Dr. Grace Ziem
